

Myeongjun Kim

Résumé

Junior Developer · From Service Development to Network & Security · [GitHub profile](#) · [Portfolio site](#)

I have built front ends, back ends and deployments, and I am extending that experience into networking and security.

Highlights

- Led a four-person team, running 152 issues and 266 pull requests and reviewing 72 of them myself; deployed the React and Spring Boot service on Ubuntu, Docker, Nginx and HTTPS.
- Designed and built WebAuthn passkey authentication that met all 47 acceptance criteria and passed 50 automated tests, with zero password fields on the public pages.
- Verified on 2,830,743 CICIDS2017 records how the data split changes detection performance (Macro F1 0.9979 → 0.3871), and published the paper with reproducible materials.

Skills

Service development Java · Spring Boot · React · TypeScript · Flask · MySQL · PostgreSQL · REST API

Authentication & security JWT · OAuth · Argon2id · WebAuthn passkeys · Graylog · n8n alerts

Networking VLAN · Routing · ACL · pfSense

Research & data Python · scikit-learn · XGBoost · SHAP

Testing & delivery Playwright · Vitest · GitHub Actions · Docker · Nginx · Ubuntu

Projects & Research

ExplainSOC — Security-AI Performance Claim Checker (ALEPH Assignment 13) 2026.09

Role Planning · Front-end implementation · User observation · Validation · Deployment

Scope 15 reading rules, conclusion card, paper lab, six user sessions, reproducible ZIP, GitHub Pages

Result A fellow trainee reached the vendor questions on a phone unaided; 187 tests gate every deploy.

Stack React 19 · TypeScript · Vite 8 · Vitest · Playwright

CLOV — Team Project 2026.06 - 2026.08

Role Team lead · Full-stack developer · Team of four

Scope Service architecture, React UI and Spring Boot API, deployment on Ubuntu, Docker, Nginx and HTTPS, issue tracking and code review

Result By August 4, 2026 the team logged 152 issues and 266 pull requests (72 reviewed by me) and served the app over HTTPS.

Stack React · Spring Boot · Docker · Nginx · OAuth

[Front-end repository](#) · [Back-end repository](#)

Network Intrusion Detection Research (ALEPH Assignment 10)

2026.09

Role Research design · Implementation · Validation · Paper writing

Scope Research design, data audit, three-model comparison, SHAP stability checks, paper and reproducible materials

Result Submitted a paper with reproducible materials: XGBoost Macro F1 fell from 0.9979 to 0.3871.

Stack Python · scikit-learn · XGBoost · SHAP

Other Work

Passkey-Protected Private Area (ALEPH Assignment 8)

2026.09

Result Met all 47 acceptance criteria and passed 50 tests; zero password fields on public pages, 401 for private requests without a session.

[Public repository](#)

AI Handoff Without Sharing the Conversation (ALEPH Assignment 5)

2026.08 - 2026.09

Result Passed all 10 fixed checks; 85 unit and 38 E2E tests stayed green with no human code fixes.

[Try the site](#) · [Handoff results](#) · [Public repository](#)

Security Board with Alerts and Privilege Revocation (course lab)

2026.09

Result Passed 45 tests; a 35,033-packet SYN flood from Kali reached Graylog, n8n, three messengers and the board log.

[Public repository](#)

GAME PULSE Data Board (ALEPH Assignment 4)

2026.08 - 2026.09

Result Passed all 317 regression tests with an audit trail for all 35 assignment conditions.

[Try the site](#) · [Public repository](#)

SOC SHIFT:30 Alert-Triage Game (ALEPH Assignment 2)

2026.08

Result Serverless build that passed 291 tests; playable from a link with no install or sign-in.

Education

SKT ALEPH Network Security Program

2026.08 - 2026.11

Full-Stack Development Program (Generative-AI PHR Solutions)

2026.03 - 2026.08

Institution Korea AI Academy, Busan

Details Java, Spring Boot and React full-stack development and applied generative AI, with a team project using MySQL, REST APIs, JWT/OAuth2, Git/GitHub, Docker and Nginx.

B.S. in Computer Software Engineering

Graduated 2025
